Score-based resolver

Target allocation at v15 evaluation and execution

01

Actor choices

All choose target T-A

D0	→ T-A	**2.4**
D1	→ T-A	**1.8**
D2	→ T-A	**0.9**

Numbers: actor logits for T-A

02

Compare scores

T-A capacity: 1 drone

D0	2.4	**Accept**
D1	1.8	**Reject**
D2	0.9	**Reject**

Compare scores for the same target

03

Reselect rejected drones

Mask rejected T-A;
ask the actor again

D0	**→ T-A**
D1	**→ T-B**
D2	**→ T-C**

Repeat if conflicts remain

Priority	Current participants → higher actor score → lower drone ID on ties
When used	Applied at evaluation and execution, not during training rollouts

Scores are illustrative. Target capacity depends on target type and remaining life.
